

Intro to the Scrum System, and the Scrum Master's Role

System Definition

From Wikipedia: **system** is a group of interacting or interrelated elements that act according to a set of rules to form a unified whole.

The Scrum System

The Four Sub-systems in Scrum

These sub-systems reinforce the following in the larger scrum system:

- Predictability
- Productivity
- Continuous Improvement
- Risk Management

Agile Values

These agile values are codified and reciprocated in the scrum sub-systems:

- Trust
- Transparency
- Commitment
- Continuous Improvement

The Systems Thinker's Edge: Why Is Codifying Agile Values Important?

Codify human values into a continuously improving system to ...

Eliminate/Mitigate:

- bad feelings
- finger-pointing
- politics
- egos

Enhance/Increase:

- leadership trust
- autonomy

Role/Scope of the Scrum Master

Specific:

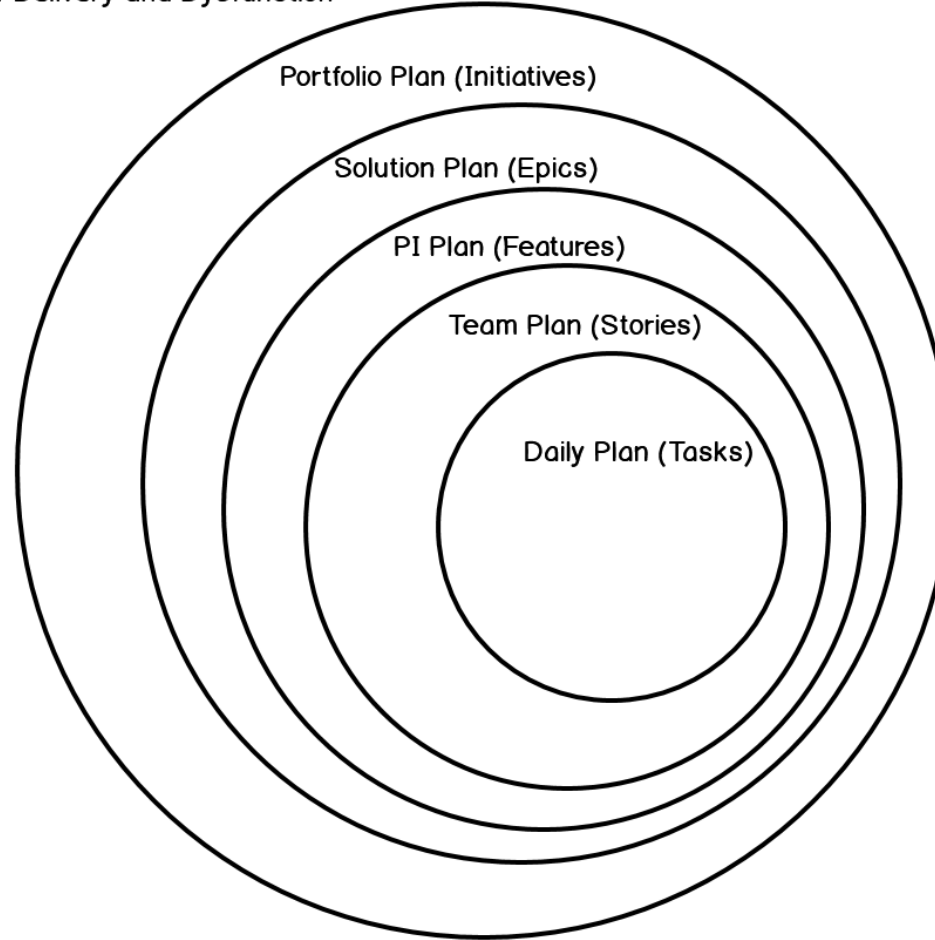

- Running Scrum Events
 - Sprint Planning (2 hours per week of sprint)
 - Daily Standup (15 minutes)
 - Backlog Refinement (1 hour per week of sprint)
 - Sprint Review (1 hour per week of sprint)
 - Sprint Retrospective (45 minutes per week of sprint)

General:

- Managing flow of value
- Facilitate removing impediments
- Protecting the scrum team's autonomy (org scalability)
 - Defend team's DoR
 - Make sure external risks are acknowledged
- PO of the process (ceremony stories)
- PO of team's Risk Governance

Where's the lowest cost (energy usage)?

What the Scrum Master Thinks About

If Goldilocks Was Risk Management

*What's a backlog runway? It's a taxonomy with work-items that support development of just enough signal (cone of uncertainty) that doesn't encourage duplication in work-item hierarchy, but also doesn't throw your delivery teams a giant snowball that they waste time trying to figure out. So do you need Initiatives? Do you need sub-epics? Be agile - experiment and find out.
